

# septic system treatment

- Eliminates odours
- Reduces solids build-up
- Bacteriological formula
- Helps keep tank & tile bed clean
- Recommended by professionals

# How many of us know how our septic system works, or think we know?

**We expect our septic systems** to handle whatever we put into them, a never ending deluge of waste, cleaners, soap, grease, papers and water, water, water.

As water use has changed over the years septic systems have been expected to process much greater volume. The increased use of antibacterial cleaners and the huge array of shampoos, laundry detergents, bleach, paper products, etc. gives homeowners an amazing opportunity to overburden and 'mess up' their septic systems!

A septic system functions on the principal of digestion of organic materials by bacteria. In the septic tank enzymes break the bonds of compounds, resulting in a simple feed that bacteria then metabolize, converting waste into mostly water, carbon dioxide and mineral ash. Clean, clear effluent then flows out of the tank and into the tile bed (leaching field) where the effluent percolates into the soil. The more efficient the system oper-

ates the less nutrient pollution goes into the environment. The more bacteriological activity in the septic tank the better the treatment of the waste in the tank and the longer the life of your tile bed.

Malfunctioning or over-used septic systems cause tile fields to fail and pollute, emit unpleasant odours, require frequent pump-outs, and contaminate soil and groundwater.

EcoEthic Septic Treatment is a premium quality bacteriological additive which contains necessary bacteria, which breakdown organic material that builds up in systems. As a result it is used and recommended by industry professionals to help prevent system failure and malfunction. A septic can be trouble free. Only clean clear effluent comes from a properly operating septic tank. With no undigested solids to clog the soil pores, the effluent readily soaks into the soil and the result is a tile field that will be trouble free for years.

---

## Your septic tank

EcoEthic Septic System Treatment is a complete blend of natural bacteria which digest organic waste.

## Key actions to prevent septic problems

- 1 Use septic-friendly cleaning products, (biodegradable, phosphate & chlorine free)
- 2 Use EcoEthic Septic System Treatment to maintain your septic system
- 3 Conserve water – use common sense
- 4 Divert water softener/iron filter backwash to sump drain
- 5 Keep trees and shrubs at least 10 feet from your tile bed
- 6 Install an effluent filter in your septic tank to protect your tile bed
- 7 Never operate heavy equipment or park on your tile bed area
- 8 Educate your family about the proper use of the septic system
- 9 Have your tank pumped and/or inspected every 3–5 years

### Reduces solids build-up

Bacteria digest organic waste leaving only water, carbon dioxide and mineral ash. Solids are digested which reduces build-up!

### Helps keep tile fields clean

Digests solids in the septic tank so they are not likely to enter the tile field. The main cause of Tile Field failure is solids buildup in and around the lines. EcoEthic products are used to restore plugged Tile Fields.

### Eliminates odours

Eliminates odour problems by digesting the odorous waste. Digested waste has no odour! No more stink around 'that side' of the house or cottage.

# septic system treatment

Made in Canada

Reduces solids in septic tank

Cleans tanks, pipe lines & drains

Eliminates odours

Contains no toxic chemicals

Environmentally beneficial

Complete bacteriological formula

Recommended by professionals

Keep  
your  
septic  
healthy
